Team members: [ENTER REGISTERED MEMBER NAMES]

Institution: [ENTER INSTITUTION, IF REQUIRED]

Submission deck, 12 pages: cover, executive summary, eight solution slides, two reference pages. Prices in ₹, times in IST.

Executive summary: buy intent, not reach; sell the season, not the match; prove the lift before scaling

Executive summary

One page; forecasts are modelled, thresholds are proposed test targets

₹150–₹200

Case target CAC per new paying subscriber (CF9). Attributed and incremental CAC are reported separately.

₹184

Modelled attributed CAC on the scalable paid rows (search/retargeting, contests), base case; ₹221 with the prospecting test.

2,798 / 1,693

Attributed / incremental new payers from the ₹10 lakh pilot, deduplicated, base case (modelled).

21%

Upgrade share tournament-pass entrants need to repay ₹183 CAC within 24 months; base assumption 20%, ladder target 30%.

The commercial problem

ATP demand on FanCode is spiky: India-friendly Masters weeks index about 150 against 100 in ordinary weeks, marquee European evenings start at 00:00-01:00 IST, and about 90% of ordinary-week viewers are already fans. A ₹79–₹99 first purchase leaves roughly ₹62 of contribution before marketing, so it cannot repay ₹150–₹200 on its own, and organic F1/football growth confounds what performance spend is credited with. Trade-offs made: defer broad acquisition, cap overnight live-conversion spend, turn takeovers into a measured test.

Cohorts first

1. Observable tennis intent that does not pay yet (free tennis viewers, tennis-page visitors, lapsed 2025 buyers): the only new-payer cohort worth paid media, and only at T-48h. 2. Finish-the-Season buyers in marquee weeks (Shanghai, Paris, ATP Finals). 3. F1, MotoGP and LaLiga pass holders, cross-sold a session that fits their hours and reported separately. ATP core fans are a retention and upgrade audience; broad casual audiences are deferred.

Connected actions

A public credit ladder (session ₹19–₹39, tournament ₹79–₹99, Finish-the-Season ₹199), each rung credited to the next within 30 days; a morning-replay journey for overnight sessions (spoiler-free push at 07:00 IST with a 20-minute cut); a Race-to-Turin narrative that gives ordinary weeks a reason; and a season-end bridge into the ₹179 all-sport Monthly Pass and the 2027 season at a ₹349 loyalty price.

Economics of the pilot (modelled)

Metric	Downside	Base	Upside
Attributed new payers (dedup) / incremental	1,959 / 889	2,798 / 1,693	3,637 / 2,751
Attributed CAC, scalable paid rows (excl. prospecting test)	₹263	₹184	₹142
Incremental CAC, all paid rows	₹674	₹354	₹218
12-month contribution per new payer (before marketing, net of cannibalisation)	₹111	₹148	₹187
24-month net of the scalable acquisition rows (rights horizon)	–₹1.7 lakh	₹0.7 lakh	₹4.1 lakh
12-month net of the whole ₹10 lakh programme	–₹7.6 lakh	–₹5.4 lakh	–₹2.5 lakh

What FanCode should approve and test next

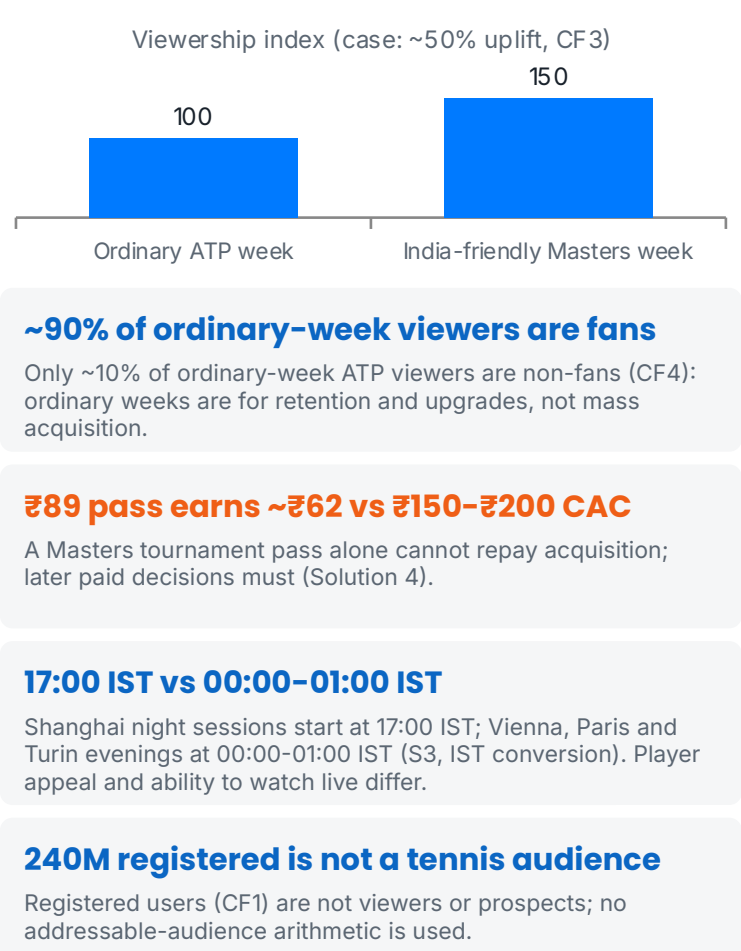

- Approve ₹10 lakh of marketing for nine weeks plus about ₹4 lakh of one-off implementation (spoiler-free replay surfaces, credit-ladder checkout).
- Measure with a persistent 10% holdout and a geo/time crossover, so marketing-caused new payers are counted against organic demand, never by last click.
- Gates: attributed CAC ≤ ₹200 and CRM lift ≥ 30% at day 45; next-event return ≥ 45% and upgrade share ≥ 20% at day 90; pass both, then scale search/retargeting and CRM for the Feb-Mar 2027 wave.

TAKEAWAY

Forecasts are modelled outputs of the cohort and channel model, not observed results; thresholds are proposed test targets. Contribution excludes the fixed ATP rights fee, so it is not profit. The same prices, budget, CAC definitions and horizons run through Solutions 1-8.

ATP adds paid growth where intent is observable: ordinary weeks are a retention audience, marquee weeks are the acquisition window

What the brief fixes

Audience priority matrix: one segment per user; the highest tennis signal wins (P1 to P6)

Segment	Observable signal (lookback)	Pays today → incremental action sought	Barrier	Objective	Priority
P1 ATP core followers	≥2 ATP events watched or ≥2 passes bought in 2026, or a 2025 season pass (365 days)	Mostly paying → season upgrade, 2027 renewal	Fatigue; no reason to pay more	Retain, upgrade, renew; no paid media	Retain
P2 Marquee- or Slam-led followers	One 2026 Masters pass and no repeat; ≥2 tennis highlight views in a marquee week; tennis-page visits (90 days); lapsed 2025 buyers	Free or lapsed → first FanCode payment (new payer)	Ordinary weeks feel irrelevant; 00:00-01:00 IST starts	Acquire first, move up the ladder	1
P3 F1 viewers	F1 pass holder, ≥3 race weekends watched this season	Existing payer → first ATP purchase (not a new payer)	Sunday clash with races; no tennis habit	Cross-sell weekday night sessions	2
P4 MotoGP viewers	MotoGP pass holder; watches morning-IST Asia-Pacific rounds	Existing payer → first ATP purchase	Small pool; different hours from F1	Cross-sell Asian-swing mornings	3
P5 Football (LaLiga) late-night viewers	≥2 LaLiga matches starting after 23:30 IST watched (60 days)	Existing payer → first ATP purchase	No presumed tennis interest: test only	Cross-sell European evening sessions	3 (test)
P6 Broad casual, cricket-only	No tennis signal (most of the 240M registered)	Free → new payer	Low intent; CAC far above target	Defer until lift is proven	Defer

TAKEAWAY First cohorts: P2 (new payers with observable tennis intent) and Finish-the-Season buyers in marquee weeks. P1 is a retention and upgrade opportunity, adjacent-sport payers are cross-sell, P6 is deferred. No segment populations are estimated; the plan is budget-normalised.

Each persona gets its own trigger, offer and window: paid spend concentrates at T-48h, owned channels build the occasion earlier

Pilot calendar, 23 Sep-22 Nov 2026 (S3): blue weeks carry paid acquisition, other weeks are owned-channel only

23-29 Sep Chengdu / Hangzhou ATP 250 · 10:00 IST	30 Sep-6 Oct Tokyo / Beijing ATP 500 · 07:30 & 17:00 IST	7-18 Oct Shanghai Masters (12 days) M1000 · 10:00 & 17:00 IST	19-25 Oct Almaty / Brussels / Lyon ATP 250 · 12:30-23:00 IST	26 Oct-1 Nov Basel / Vienna ATP 500 · 18:00 & 00:00 IST	2-8 Nov Paris Masters M1000 · 15:30 & 00:00 IST	8-14 Nov Stockholm ATP 250 · 16:30 & 23:00 IST	15-22 Nov Nitto ATP Finals, Turin Finals · 18:30 & 01:00 IST
--	--	---	--	---	---	--	--

Orange = overnight starts, sold as a morning-replay occasion, not chased with live-conversion spend. Paid conversion: T-48h to match start (CF11). Owned and editorial build: from T-7 days. Retention: from the first view.

Persona	Trigger and window (IST)	Offer → intended next paid action	Sample message (original)	Channel · suppression · frequency cap	Activation KPI · retained-payer KPI
P2 Marquee-led, free or lapsed	T-48h before Shanghai first round (Mon 5 Oct for Wed 7 Oct); 07:00 IST replay push after overnight Paris and Turin sessions	₹89 Shanghai pass → credit toward ₹199 Finish-the-Season within 30 days	"Shanghai starts Wednesday, 17:00 IST. ₹89 covers all 12 days, and counts toward the rest of the season if you upgrade by 6 Nov."	Search + retargeting (paid), push (owned); suppress on purchase; 3 pushes/week	First purchase rate; upgrade within 30 days; D90 retained payer
P1 ATP core (paying)	Sunday night after each tournament final; day 20 of the 30-day credit window	Upgrade to Finish-the-Season ₹199 (credit applied); 2027 loyalty price ₹349 by 15 Jan	"Vienna is done, Paris starts Monday. Three Turin places are still open. Your ₹79 Vienna pass takes ₹79 off the rest of the season."	Push/email only, no paid media; 2 messages/week	Next-event return; upgrade share; 2027 renewal (eligible cohort)
P3 F1 pass holders (existing payers)	Tuesday-Friday after an F1 weekend; never on race Sunday	₹29-₹39 India-friendly night session → session price credited to the tournament pass	"No race until Sunday. Tonight's Shanghai night session starts 17:00 IST, ₹29, replay included."	In-app + push; suppress if any ATP entitlement is active; 2/week	First ATP purchase (reported apart from new payers); ladder step
P4 MotoGP pass holders (existing payers)	Saturday and Sunday mornings in the Asian swing (Tokyo 07:30, Shanghai 10:00 IST)	₹29 day-session pass → tournament credit	"You're up early for MotoGP anyway. Shanghai day session from 10:00 IST, ₹29."	Push; 1/week	First ATP purchase; morning-session views
P5 LaLiga late-night viewers (existing payers)	Friday and Saturday late night in the Vienna, Paris and Turin weeks	₹19-₹29 evening session with the 07:00 IST spoiler-free replay	"Kick-off is at 1:30 AM and so is the Paris evening session. ₹29: watch it live, or spoiler-free at 7 AM."	In-app; 1/week; stop after 2 unopened pushes	First ATP purchase; replay opens; refunds < 2%

Marquee week (Shanghai, 7-18 Oct): paid search and retargeting at T-48h, a contest with pass prizes, ESPN.in takeover in test cities, CRM to all personas, editorial preview. Ordinary week (Almaty/Brussels/Lyon, 19-25 Oct): no paid acquisition; Race-to-Turin update, ₹19 session passes for followed players (P3-P5), upgrade-credit reminders to P1 and P2, morning replays for the 23:00 IST Brussels evening session.

TAKEAWAY Differentiation sits in timing and entitlement state, not only in creative: new payers get the tournament-to-season ladder; adjacent-sport payers get a ₹19-₹39 session that fits their hours. T-48h paid spend converts an occasion that owned channels and editorial have already built.

A public three-rung ladder (session, tournament, Finish-the-Season): each rung is credited to the next, so the top price is never undercut

Offer architecture and competitor positioning

Rate card: existing products in grey, proposed tests in orange

SKU	Price	Validity and content	Target	Upgrade treatment	Restriction
Session pass (proposed)	₹39 / ₹29 Masters and Finals (India-friendly / overnight); ₹29 / ₹19 ATP 500; ₹19 ATP 250	One session; live + 48h replay, spoiler-free morning cut	P3-P5 existing payers; P2 in overnight weeks	Full price credited to that tournament's pass until its final	Max 3 per tournament per account; floor ₹19
Tournament pass (existing, case ₹79-₹99)	₹79 ATP 250/500; ₹89 Masters 1000; ₹99 ATP Finals	Whole event, live + replays	P2 new payers; P1 repeaters	Full price (cap ₹99, one per account) credited to Finish-the-Season within 30 days	No stacking with promos; floor ₹59
Finish-the-Season pass (proposed)	₹199	5 Oct-22 Nov: Shanghai, all 250s, Basel/Vienna, Paris, ATP Finals, weekly show, replays	Marquee-week paid media; upgraders	2027 season at the ₹349 loyalty price by 15 Jan (a price, not a credit)	Only 3+ event buyers save; floor ₹149
ATP Season Pass 2027 (existing ₹399)	₹399 list; ₹349 loyalty	Calendar year 2027, all 56 events; not all-sport	Renewers; January direct buyers	Public rate card declines with remaining season value (proposed)	Floor ₹249
Monthly Pass, all sports (existing)	₹179 (₹199 struck, S10)	All paywalled sports for a month, ATP included	Season-end bridge for ATP-only holders	Sold as a new entitlement on 23 Nov	Holder watching ATP is not a new payer

Rules. One price reduction per checkout: upgrade credit > segment offer > public promo. Arbitrage: three ₹19 sessions (₹57) undercut only the ₹79 ATP 250 pass, so sessions are capped at three per tournament; two tournament passes (₹158-₹178) cost less than ₹199, so only three-or-more event buyers gain. **Schedule changes.** Cancelled session or walkover before start: automatic session credit (refund on request); abandoned event: pro-rata credit; no SKU promises a named player. **Rejected.** A ₹19 replay rental (₹10 below the session pass, a fourth checkout choice; replay is folded into the session pass) and a player bundle (participation cannot be guaranteed; events define bundles, players the narrative).

Two timing examples and one upgrade checkout

India-friendly Masters session: Shanghai night session, Wed 14 Oct, 17:00 IST: ₹39 session · ₹89 tournament · ₹199 Finish-the-Season.

Overnight ATP 500 session: Vienna evening session, Thu 29 Oct, 00:00 IST: ₹19 session with the 07:00 IST spoiler-free replay · ₹79 tournament · ₹199 Finish-the-Season.

Upgrade example: Shanghai pass bought 7 Oct for ₹89; upgrade to Finish-the-Season by 6 Nov: pay ₹110 (₹199 – ₹89 credit). Total paid ₹199, the same as a direct buyer; the credit is a price reduction, never revenue. Contribution of the step: ~₹75.

Competitor panel: out-of-pocket INR and scope

Product	Out-of-pocket (INR)	Period and scope
FanCode tournament pass (existing)	₹79-₹99	One ATP event, live + replays (CF15)
FanCode Finish-the-Season (proposed)	₹199	5 Oct-22 Nov 2026, all remaining ATP events
FanCode Monthly Pass	₹179 a month	All paywalled sports incl. ATP (S10, S11)
JioHotstar Mobile / Super	₹79 / ₹149 a month; ₹499 / ₹1,099 a year	1 or 2 devices, ads; no ATP Tour (S5)
SonyLIV Mobile Only / Premium	₹699 a year; ₹399 a month or ₹1,499 a year	720p or up to 4K; live sports; no ATP Tour (S6)
Tennis TV (ATP's own service)	₹449 a month; ₹4,499 a year (App Store India)	ATP-only, no Slams; India availability under FanCode exclusivity unverified (S7, S8)

TAKEAWAY The price buys a defined scope: one session, one event, or the rest of the season. Credits keep the ladder arbitrage-safe (no path to Finish-the-Season costs less than ₹199) and protect value: only three-or-more event buyers, the habit we want, pay less than before.

Sources: CF8, CF15, CF16 (case); S5 JioHotstar press release (new-subscriber prices from 28 Jan 2026); S6 SonyLIV help centre; S7-S8 Tennis TV help centre and App Store India in-app listing; S10-S11 FanCode subscription page and terms; S12 ITD posts. Tennis TV live availability in India under FanCode exclusivity is not verified. Secondary equivalent-monthly view: Finish-the-Season ≈ ₹124 a month over 1.6 months, JioHotstar Mobile annual ≈ ₹42 a month, Tennis TV annual ≈ ₹375 a month; entertainment bundles are not ATP substitutes. Cost assumptions: 18% GST, 4% gateway and support, ₹2 per streaming hour.

₹150–₹200 CAC pays back only for Finish-the-Season or owned-channel entrants; tournament-pass entrants need a 21% upgrade share

Contribution before marketing per customer pathway (₹, base case, modelled)

Pathway (entry SKU; branches are mutually exclusive)	90 days	12 months	24 months (rights horizon)	Affordable CAC 12m / 24m
1. Entry-only: ₹89 Masters pass, never returns	₹62	₹62	₹62	₹62 / ₹62
2. Repeat tournament buyer, no upgrade (1.5 / 2.5 more passes)	₹121	₹150	₹209	₹150 / ₹209
3. Upgrade via credit: ₹89 + ₹110 to Finish-the-Season, then loyalty renewal	₹147	₹255	₹359	₹255 / ₹359
4. Direct Finish-the-Season buyer (₹199), then loyalty renewal	₹147	₹299	₹455	₹299 / ₹455
Expected tournament-pass entrant (40% / 40% / 20% mix of 1-3)	₹102	₹136	₹180	₹136 / ₹180
Expected session entrant (₹29 blended: 45% never return, 25% repeat, 30% step up)	₹50	₹63	₹81	₹63 / ₹81

How to read it. Contribution = price ÷ 1.18 – 4% of gross – ₹2 per streaming hour; the ATP rights fee is fixed and confidential, so this is contribution, not profit. A ₹89 pass earns ₹62, the ₹110 upgrade step ₹75, a ₹349 loyalty renewal ₹222; the season-end Monthly Pass bridge adds about ₹10 per Finish-the-Season holder (inside pathways 3 and 4). Repeat purchases and upgrades are never both counted for one customer; existing subscribers are not new acquisition revenue. **Break-even upgrade share** $u^* = (CAC - C_{entry}) \div (C_{upgrade} - C_{entry})$, entry path = 50/50 mix of pathways 1 and 2. At the ₹183 search/retargeting CAC: 52% within 12 months (not achievable), 21% within 24 months (base 20%, ladder target 30%); 7% at ₹150 and 29% at ₹200 over 24 months.

Downside / base / upside (modelled)

Metric	Downside	Base	Upside
Attributed new payers (dedup)	1,959	2,798	3,637
Attributed CAC, scalable paid rows	₹263	₹184	₹142
Incremental CAC, all paid rows	₹674	₹354	₹218
12-month contribution per new payer	₹111	₹148	₹187
Cannibalisation cost, 12 months	₹0.1 lakh	₹0.2 lakh	₹0.2 lakh
24-month net, scalable acquisition rows	–₹1.7 lakh	₹0.7 lakh	₹4.1 lakh
12 / 24-month net, whole ₹10 lakh programme	–₹7.6 lakh / –₹6.8 lakh	–₹5.4 lakh / –₹3.5 lakh	–₹2.5 lakh / ₹1.0 lakh

24-month value of a tournament entrant (₹); green ≥ ₹183 CAC

Upgrade share ↓ / repeat passes in 24 months →	1.5	2.5	3.5
10%	₹127	₹150	₹174
20%	₹157	₹180	₹204
30%	₹186	₹210	₹233
40%	₹216	₹239	₹263

TAKEAWAY Base case: the pilot loses ₹5.4 lakh in 12 months and the scalable rows turn positive (₹0.7 lakh) only within the 2028 rights horizon. If the measured upgrade share stays below ~21%, stop scaling tournament-pass acquisition and sell only Finish-the-Season and season entries to paid audiences.

Retention is built around the next occasion: the morning replay, the Race to Turin, the 30-day upgrade window and a season-end bridge

Lane	Onboarding (day 0)	After the first view (days 0-2)	Before the next event (T-72h to T-24h)	Ordinary week	Expiry / season end (22 Nov)	Renewal / next season (Dec-Jan)
Customer trigger	First purchase (any rung)	Live session watched, or overnight session missed	Tournament ends; followed player's next draw is out	No marquee event; ATP 250 week	Finish-the-Season or season entitlement expires	2027 season opens 5 Jan; no Slam rights 18 Jan-1 Feb; Feb 500s from 9 Feb
FanCode action (owner)	Pick 2 players and a viewing window (live / morning); spoiler preference; IST schedule for the event (CRM)	07:00 IST spoiler-free push with full replay and 20-minute cut, only for overnight sessions, suppressed if watched live (Product, Editorial)	Race-to-Turin update: standings, next event's IST windows, day-20 credit reminder, one-tap upgrade (Editorial, CRM)	Weekly show + ₹19 session for the followed player's match; no paid media; nothing sent if the player is out (Editorial)	Season recap; Monthly Pass ₹179 bridge (F1 finale, MotoGP, LaLiga); Next Gen Finals in December; 2027 loyalty price ₹349 by 15 Jan (CRM, Commercial)	Season-start push with the first India-friendly session; Feb 500s as the first paid occasion; win-back for lapsed entrants (CRM)
Commercial outcome (measure)	Profile completion; qualified first view ≥ 20 min	2nd qualified view within the event (behavioural retention)	Next-event return; upgrade to Finish-the-Season (commercial retention)	Qualified views in ≥ 2 distinct event weeks (behavioural)	Cross-sport upgrade: a new ₹179 entitlement, incremental (not free access)	Renewal rate among the eligible, matured cohort only

Bridge 1: ATP to the rest of the portfolio

Verified access rule: an ATP tournament or Finish-the-Season pass gives no F1, MotoGP or LaLiga access. The Monthly Pass (₹179, S10) covers all paywalled sports for a month (S11), so the season-end offer on 23 Nov is a new, incremental entitlement, not a free benefit. A Monthly or Yearly holder who watches ATP is an engagement outcome, never a new ATP payer. Suppression: no bridge offer to anyone already holding a Monthly or Yearly pass.

Bridge 2: the rest of the portfolio to ATP (existing payers)

LaLiga late-night viewers get the Paris and Turin evening sessions (00:00-01:00 IST) with the morning replay; F1 holders get Tuesday-to-Friday night sessions, never race Sunday; MotoGP holders get Asian-swing morning sessions. Each is a first ATP purchase by an existing payer, reported apart from new payers, and each rung is credited toward the next. Entitlement is checked before every send: no offer to a user who already holds ATP access.

Controls, off-season and the three retention definitions

Caps: 3 pushes a week for new payers, 2 otherwise, 1 replay push a day; opt-out honoured platform-wide; a refund suppresses offers for 30 days. Off-season (23 Nov-4 Jan): Next Gen Finals (date TBD), "best of 2026" replays, no invented live tennis. Behavioural retention = repeat qualified viewing across distinct weeks; commercial retention = a paid ATP entitlement active in the window; renewal = repurchase after expiry, reported only for eligible matured cohorts.

TAKEAWAY

The morning replay and the Race to Turin create the next occasion; the upgrade credit is the next paid decision. Outcomes: next-event return and the day-90 retained-payer rate, reported only for cohorts observed for 90 days. A still-valid pass proves nothing alone: entitlement and qualified viewing are reported together.

A ₹10 lakh pilot at a 52% performance share: ₹184 attributed CAC on the scalable rows; prospecting must earn its place

Row	Share	₹	Persona	Execution and estimation basis	New payers (base)	CAC attributed / incremental	Evidence	Scale / stop rule
C1 Prospecting, cold tennis interest (learning test)	10%	₹1.0L	P2 cold; P6	Meta/YouTube video, FTS ₹199 in marquee weeks; CPM ₹120 × CTR 0.7% × CVR 1.5% × 80% new; geo-split	70	₹1,429 / ₹2,381	CPM, CTR, CVR assumed; geo readout	Stop at day 30 unless CAC < ₹300; money to C2
C2 High-intent search + retargeting at T-48h	35%	₹3.5L	P2 new-to-pay	Search on tennis/live terms; retargeting of tennis-page visitors; CPC ₹7 × CVR 4.5% × 85% new; control IDs excluded	1,913	₹183 / ₹282	Timing CF11; CPC, CVR assumed	Scale if ≤ ₹200 attributed and ≤ ₹300 incremental; pause at ₹250
C3 First-party CRM: push, email, in-app	10%	₹1.0L	P2-free new payers; P3-P5 existing payers	Segment pushes at T-48h and 07:00 IST; per 100k eligible: 90% delivered × 5% click × 8% buy; 10% holdout	486 + 386 existing-payer ATP purchases	₹83 / ₹167	Pools, rates assumed; holdout readout	Keep if measured lift ≥ 30%; else fold into C2
C4 Tennis communities and contests (ITD)	7%	₹0.7L	P1/P2 community	3 contests with pass prizes (Shanghai, Paris, Finals); ~9,300 clicks × 7.8% (case CVR) × 55% new	400	₹175 / ₹350	Case CVR 7.8%; CPC assumed	Continue only if effective CPC ≤ ₹8.6
C5 Editorial and native tennis personalities	15%	₹1.5L	All	Race to Turin, 20-minute Morning Match cuts, weekly-show tie-ins; 2 editors on event weeks	not directly attributed	not directly attributed	CF14; cost assumption	Cut if replay opens < 15% with no return lift
C6 ESPN.in takeover, geo/time-split test	10%	₹1.0L	Broad tennis readers	Live in test cities, held out in matched cities; crossover Shanghai/Paris	not directly attributed	not directly attributed	CF13; lift readout	Scale only on positive geo lift

C8 Measurement and analytics	7%	₹0.7L	n/a	Holdout operations, geo design, dashboards, analyst time	not directly attributed	not directly attributed	Cost assumption	n/a
Total	100%	₹10.0L		Performance rows C1+C2+C4 = 52% (case today 65-70%, CF10); owned 10%; content 25%; retention 6%; measurement 7%	2,798 attributed; 1,693 incremental (dedup)	Paid rows ₹221 / ₹354; excl. C1 ₹184 / ₹294; programme ₹357 per new payer		Reallocation rule below

Performance share of spend: current vs proposed

Proposed pilot

52%

Current (case 65-70%, midpoint)

68%

Contest CPC sanity check (case CVR 7.8%). ₹150-₹200 CAC allows a media CPC of ₹11.70-₹15.60 only if every buyer is a new payer; at a 55% new-payer share the ceiling is ₹6.44-₹8.58, and on an incremental basis (50% validated) ₹3.22-₹4.29. The planned ₹7.5 clears the attributed ceiling only because prizes are passes, not cash; above ₹8.6, contests stop.

Downside exposure and reallocation rule. Downside attributed CAC on the scalable rows is ₹263, incremental ₹674: the target is missed. Day 30: stop C1 unless attributed CAC < ₹300. Day 45: move C6 money to C2 only if C2 is ≤ ₹200 attributed and ≤ ₹300 incremental. Pause any paid row above ₹250 attributed; owned rows keep running. CRM conversions are capped by the eligible pool and never rescue a missed paid target.

TAKEAWAY Commercial result (base, modelled): 2,798 attributed and 1,693 incremental new payers, ₹184 attributed CAC on the rows that would scale (₹221 with the prospecting test). The allocation change funds measurement and retention; evidence, not preference, returns money to performance.

Sources: CF9-CF13 (case). Method per paid row: impressions = spend ÷ CPM × 1000; clicks = impressions × CTR; purchases = clicks × conversion; new payers = purchases × new-payer share; incremental = new payers × validated incremental share. Owned row per 100k eligible: 90% delivered × 5% click × 8% buy. Dedup: 8% of CRM and contest new payers removed as already in retargeting audiences. Blended CAC = spend ÷ deduplicated new payers (harmonic check on paid rows: ₹218). Planning pools (P2-free 150k, F1 120k, MotoGP 40k, LaLiga 60k) are assumptions replaced by CRM counts on day 0; totals scale linearly.

8

Growth is credited to ATP marketing only when a held-out control says so; retention is reported only for matured cohorts

Test design: causal impact, not last-click attribution

Where	Design	What it separates
Owned channels (push, email, in-app)	10% persistent user-level holdout for the whole pilot, stratified by payment state, sport affinity (P2-P5), tournament-tier exposure and viewing-window preference; control users receive no ATP CRM on any owned channel	Marketing-caused purchases from organic tennis demand, including demand created by F1 and football viewing
Paid retargeting	The same control IDs are excluded from retargeting audiences via customer lists; intention-to-treat denominators; unavoidable prospecting spillover is reported, not assumed away	Retargeted conversions from conversions that would have happened anyway
Takeovers and prospecting	Geo/time crossover: live in test cities and held out in matched cities in the Shanghai week, then swapped for the Paris week; event-strength confounding is acknowledged in the readout	Broad-media lift from event strength

Intention-to-treat arithmetic. Treatment conversion = new payers in treatment ÷ eligible treatment users; control conversion = the same in control. Incremental new payers = (treatment – control conversion) × eligible treatment users; incremental CAC = incremental campaign cost ÷ incremental new payers. A zero or negative lift is reported as undefined and unfavourable. A paid customer already entitled to ATP is never an acquisition.

Minimum sample per arm to detect a lift (proposed readout rule)

Baseline conversion	+30% lift	+50% lift	Eligible pool at 10% holdout (+50%)
0.36% (CRM, P2-free, per treated user)	55,486	21,704	2,17,032
1.0% (retargeting audience)	19,827	7,750	77,496
2.0% (lapsed 2025 buyers)	9,798	3,826	38,252

Scorecard: one north star plus nine supporting metrics

Metric	Definition (numerator ÷ denominator, window)	Proposed threshold
North star: D90 retained-payer rate	Incremental new payers who at day 90 hold a paid ATP entitlement and made ≥ 1 qualified view in days 61-90 ÷ incremental new payers acquired ≥ 90 days earlier; if days 61-90 fall in the off-season, the window is the first 30 days of the 2027 season	≥ 30%
Contribution per acquired payer	Contribution before marketing ÷ attributed new payers, 12-month view (modelled, then measured); a retained user can still be uneconomic	≥ ₹150 (base ₹148)
Attributed / incremental CAC (row C2)	Row spend ÷ attributed new payers; incremental cost ÷ incremental new payers (holdout)	≤ ₹200 / ≤ ₹300
Next-event return (leading)	New payers with a qualified view in the next qualifying tournament ÷ new payers whose next tournament has ended	≥ 45%
Upgrade share within 30 days	Tournament entrants buying Finish-the-Season inside 30 days ÷ entrants whose window has closed	≥ 20% (ladder target 30%; break-even 21% at 24 months)
Behavioural / commercial retention (day 60)	Qualified views in ≥ 2 distinct event weeks ÷ new payers ≥ 60 days old; active paid ATP entitlement on day 60 ÷ the same base	≥ 35% / ≥ 40%
Renewal (matured cohorts only)	2027 season purchases by 15 Feb ÷ 2026 Finish-the-Season holders; separately ÷ 2026 season holders	≥ 50% / ≥ 85% (case-informed)
Cross-sport bridge	Monthly Pass purchases within 14 days of ATP expiry ÷ expiring ATP-only holders	≥ 8%
Customer experience	Replay-push opens ÷ delivered; weekly opt-outs ÷ recipients; refunds ÷ purchases	≥ 25% · < 1% · < 2%

TAKEAWAY Marketing-caused new payers = treatment minus control, never last click. Organic F1/football demand sits inside the control group and is subtracted; subscribers already entitled to ATP are never counted as new. Because a retained user can still be uneconomic, contribution per payer sits beside the north star.

Approve a ₹10 lakh measured pilot plus ₹4 lakh implementation; **scale acquisition in the February 2027 wave only if three gates pass**

Phase (dates, events)	Actions (accountable function)	Depends on	Gate and decision
Days 0-14 · 23 Sep-6 Oct · Chengdu/Hangzhou, Tokyo/Beijing	Replace planning pools with CRM counts; build segments and the 10% holdout (Growth analytics, CRM). Approve rate card, credits, refund policy (Commercial, Legal). Contests with ITD (Community). Morning-replay v0: CRM-only spoiler-free push (CRM, Editorial).	Existing CRM and editorial tools; legal review of credits; no engineering	G1 (day 14): holdout live, rate card signed off, control IDs loaded into ad platforms
Days 15-45 · 7 Oct-6 Nov · Shanghai, 250s, Basel/Vienna, Paris	T-48h paid rows live in marquee weeks; credit ladder live; ESPN.in geo test in the Shanghai week; morning-replay v1 (hidden scores, 20-minute cuts) when engineering ships (Product, Editorial); Race-to-Turin updates after finals.	Engineering: spoiler-free surfaces, timed replay automation, checkout credits (~6 engineer-weeks); ATP Media clip rights within the agreement	G2 (day 45): C2 attributed CAC ≤ ₹200; CRM relative lift ≥ 30%; upgrade share ≥ 12% so far. Fail: stop C1 and C6, keep owned rows
Days 46-90 · 7 Nov-21 Dec · Paris, Stockholm, ATP Finals, off-season	ATP Finals push (18:30 and 01:00 IST sessions, replay-first for the latter); season-end bridge to the Monthly Pass on 23 Nov; 2027 loyalty price opens; D30 and D45 cohort readouts.	Renewal SKU in checkout; Next Gen Finals date from ATP	G3 (day 90): next-event return ≥ 45%; upgrade share ≥ 20% for closed windows; incremental CAC ≤ ₹300
Days 91-120 · 22 Dec-20 Jan · off-season, 2027 season from 5 Jan	D90 retained-payer readout for the September-October cohorts; season-start reactivation; decision memo on the February-March wave (Feb ATP 500s, Indian Wells, Miami).	Matured cohorts only; 2027 calendar	Scale decision: G2 and G3 passed → scale C2 + C3 to ₹5-₹8 lakh a month for the wave; otherwise redesign the ladder or stop paid acquisition

Material risk	Mitigation	Model impact
Cannibalisation of full-price buyers by credits and the loyalty price	One credit per account; three sessions per tournament; loyalty price only for prior holders; monitored weekly	₹0.2 lakh base, ₹0.1 lakh downside (12 months)
Insufficient incremental lift	Holdout and geo designs; stop rules at days 30 and 45; owned rows keep running	Incremental CAC ₹354 base, ₹674 downside
Scheduling and player uncertainty (withdrawals, overnight moves)	Event-defined SKUs; automatic session credits; copy never promises a player	Refunds assumed < 2% of purchases; 2% support cost in every price
Delivery capacity (editorial cuts, engineering)	Two editors on event weeks; v0 CRM-only fallback; engineering scoped to two features	C5 ₹1.5 lakh; ₹4 lakh one-off implementation
Smaller eligible pools; consent limits	First-party consented data only; no Dream11 data; pools replaced on day 0	CRM totals scale linearly; paid rows unaffected

Investment decision (proposed). Approve ₹10 lakh of marketing for the nine-week pilot plus about ₹4 lakh of one-off implementation. Expected in the base case (modelled): 2,798 attributed and 1,693 incremental new payers, ₹184 attributed CAC on the scalable rows, -₹5.4 lakh programme net at 12 months, ₹0.7 lakh on the scalable rows within the rights horizon.

First accountable actions (this week): Growth analytics loads CRM counts and the holdout; Commercial signs the rate card and credit terms; Product scopes the two engineering features; Editorial books the event-week editors.

Evidence required to expand: G2 and G3 passed on measured, not attributed, data.

Next 12 months: the February-March 2027 wave (500s, Indian Wells, Miami) is funded by the scale decision; clay and grass swings run on owned channels and the ladder; 2027 season renewals in January 2028 feed the final rights year.

TAKEAWAY

The smallest version that tests the proposition is CRM-only on day 0; engineering, rights approvals and the paid rows are added only as gates pass. Scale or stop is decided on day 90 with matured cohorts, and later cohorts are re-read at their own day 90.

Definitions and method notes

Term	Definition used throughout the deck
New payer	First-ever FanCode payment is an ATP pass in the pilot window. A first ATP purchase by an existing F1, MotoGP, LaLiga or Monthly payer is an existing-payer ATP purchase, reported separately, never a new payer.
CAC, attributed vs incremental	Attributed CAC = row spend ÷ attributed new payers. Incremental CAC = spend ÷ incremental new payers (attributed × validated incremental share from the holdout or geo test). Blended CAC = spend ÷ deduplicated new payers; the harmonic form $1 \div \sum(w_i \div CAC_i)$ is only a check across rows with the same denominator.
Contribution before marketing	Price ÷ 1.18 (18% GST assumed included) – 4% of gross (gateway 2%, support and refunds 2%) – ₹2 per assumed streaming hour. Excludes the fixed, confidential ATP rights fee, so it is not profit. Credits are price reductions, never revenue; a rupee of bundle revenue appears once.
Horizons, case observations, pools, times	90 days, 12 and 24 months from a 7 Oct 2026 purchase; 24 months sits inside the rights term through 2028 (CF18). CF7 and CF8 are baselines with unspecified windows, so new entrants use lower, disclosed renewal assumptions. CRM pools (150k / 120k / 40k / 60k) are assumptions replaced by counts on day 0. Session times are typical of recent editions, converted with time-zone-aware tools. The brief's illustrative 240M/120M/24M chart is never used as an audience estimate.
